

Phrase1: Issue collect

Phrase 2+3: Dockerbuild and TestGen

iteration context (not enough space)

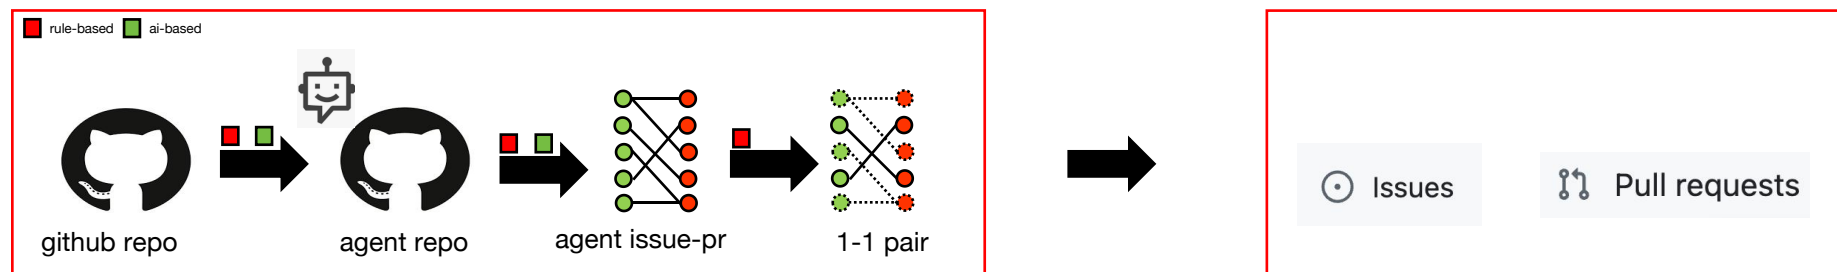

typical complexity: $m+n$
with big iteration: $(m+n) \times \text{big loop}$

 SWE agent: have full scarfold(default: claude-code with gpt4.1)

 gate agent: Given context to a yes/no judgement(eg whether docker build successful or test satisfy)

Bug

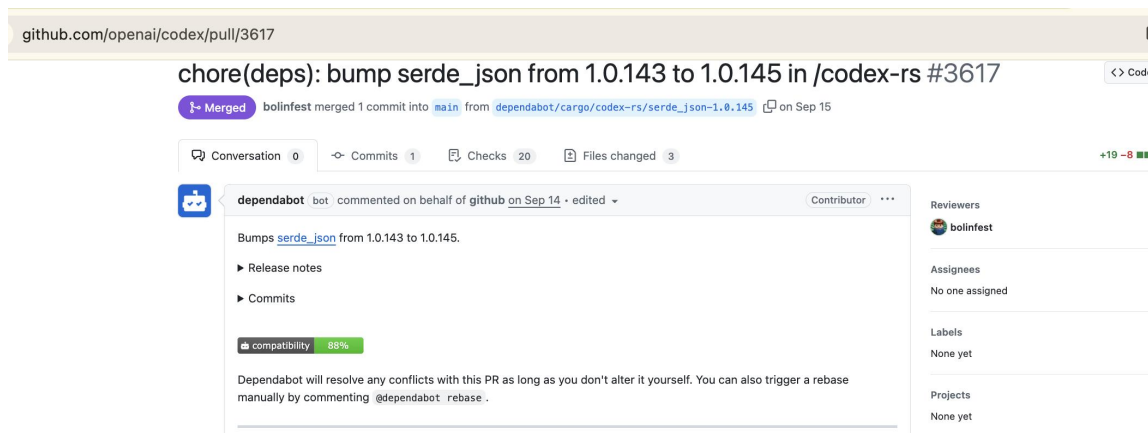

Phrase1: Issue collect

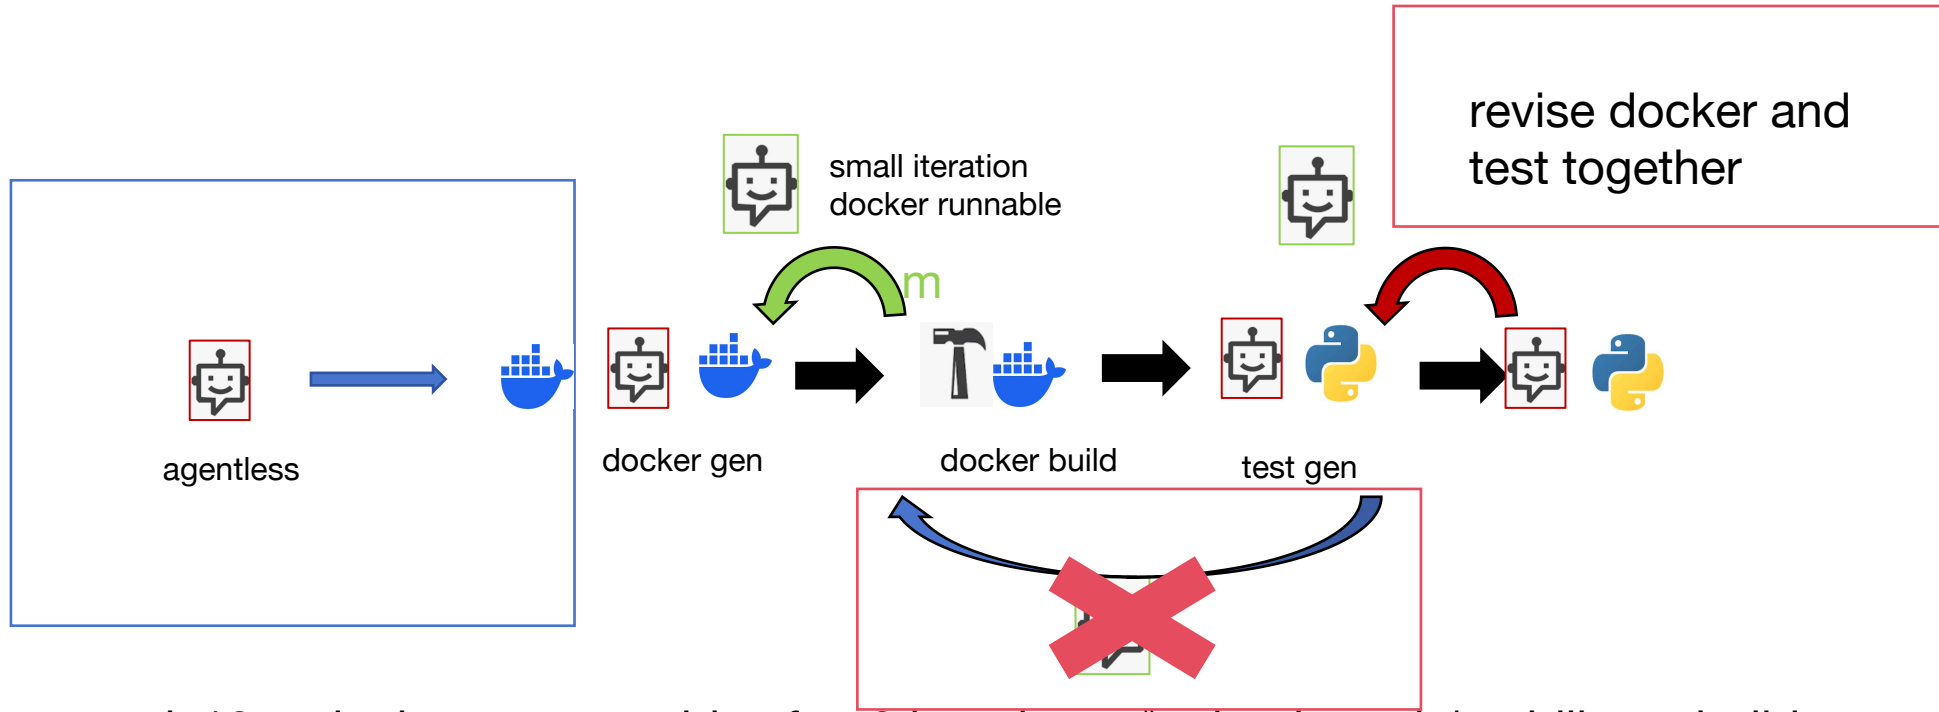

previous: only form evaluation

openai/codex: issue128 actually has no related pr

but on github: all the dependent bot pr will be automatically linked to the issue before it -> fix: add content filter

Opt

on strix13: docker not runnable after 3 iterations - $\gg$ claude code's ability to build dockerfile is not strong enough

now: add a agentless initialization(previously plan B,but surprisingly able to support pass on test)

agentless:from mirror(previous from scratch)

rule based filter and sent to AI(not agent)
