

AgentDoctor

1 Prepare the repo and issue

git clone

issue-pr pair

2 Environment Configuration

Deliverable for step2: env.dockerfile

2.1 initial with agentless

codebase

rule based filter
*specific filename
*specific suffix

Readme.md, *.md

system prompt 2.1

prompt2.1

chat api

initial dockerfile content

file.write

env.dockerfile

- 1.contains unittest environment (including python and other dependencies)
- 2.contains repo environment (able to run the repo)

2.1 initial with agentless

```
agentless_init_dockerfile(repo_path)
```

system prompt 2.1

source/tools/docker-build-init/main.py:line138

2.2 iterate with agent

code base

env.dockerfile

system prompt 2.2

prompt2.2

code agent

claude.dockerfile

run and build

retry under

max-dockerfile-retries

claude.dockerfile

system prompt 2.2

src/repo-build/claude/run_claude.py: line52

*including envcironment variables of some
forge sevice

3 Test Generation

code base

issue content

pr content

(including patch)

system prompt 3.1

prompt 3.1

code agent

test*.py

run test*.py in

dockerfile

retry under

max-test-retries

dockerfile

test*.py

prompt 3.2

code agent

cofix both files

retry under

max-cofix-retries

claude.dockerfile

test*.py

meta infomation

database

system prompt 3.1

src/test-gen/claude/run_claude.py:line102

run test*.py in dockerfile

should fail in buggy
should pass in fixed

prompt 3.2

src/pipeline/build-run/main.py:line 508
