

rule-based ai-based

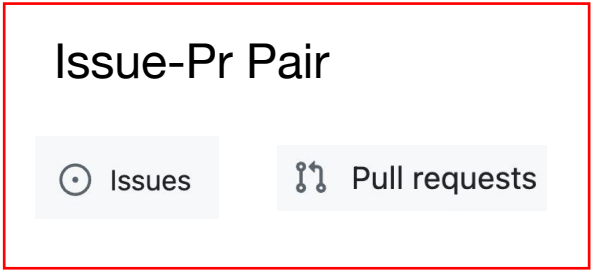

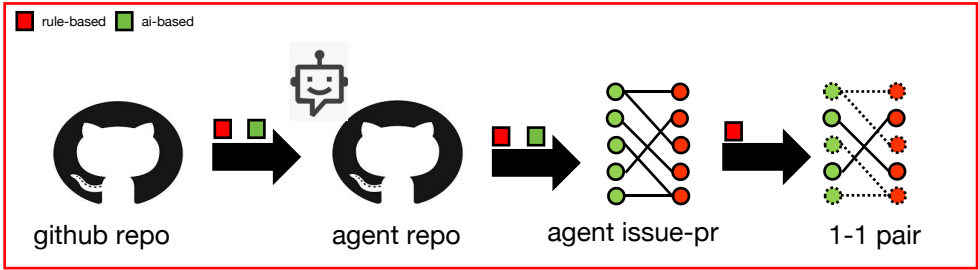

for Alfin: from pipeline to deploy and continuous growing

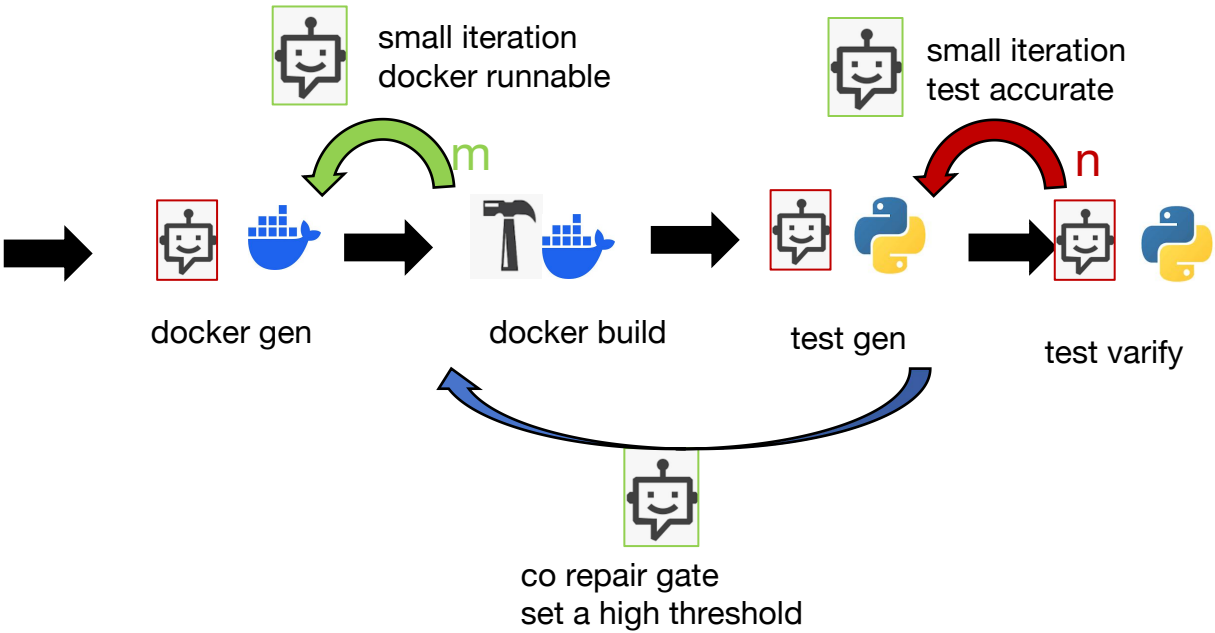

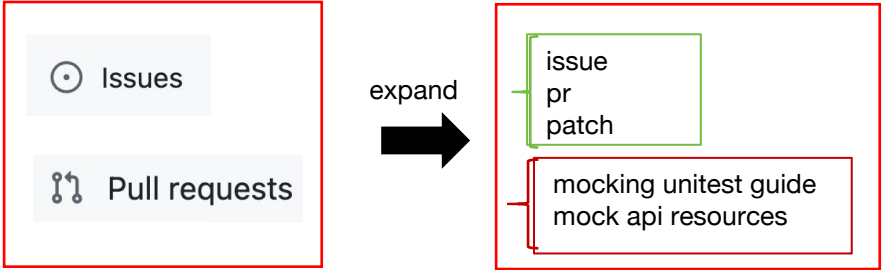

for Eamin: Add iteration correction and other agent issue(MCP) and so on

Phrase1: Issue collect

Phrase 2+3: Dockerbuild and TestGen

iteration context (not enough space)

typical complexity: $m+n$
with big iteration: $(m+n) \times \text{big loop}$

 SWE agent: have full scarfold(default: claude-code with gpt4.1)

 gate agent: Given context to a yes/no judgement(eg whether docker build successful or test satisfy requirements)

example:codex/128

For shortcuts

✓ Dockerfile generation completed

Building Docker image...

✓ Docker build succeeded

Agent response: yes

Interpreted as: yes

✓ SUCCESS: Docker build completed successfully!

Dockerfile: /home/cc/SWEGENT-BENCH/codex/claude.dockerfile

dockerbuild:2

Fixed version test result: PASS

Output:

Running test: test128.py

.

Ran 1 test in 2.456s

OK

The test passed successfully. The rate limit configuration option has been properly implemented and the issue is resolved.

Test Summary

Buggy version test: ✓ Failed as expected

Fixed version test: ✓ Passed as expected

✓ Test verification successful!

Repository: openai/codex

Issue: #128 - Handle rate limit issues

Test file: test128.py

test gen:2

co repair gate(big iteration)
not triggered
